Next Video

📖 Notes

Sometimes you'd like to show a demo of working code without a jupyter notebook around it. The code is useful, but it might scare some stakeholders away. For those moments __streamlit__ can be a great option.

To get started with streamlit, you need to install it in your virtual environment.

```
pip install streamlit
```

Note that it would be good to also take the time to install the other dependencies we'll use in this series of videos.

```
pip install pandas matplotlib scikit-learn
```

To run the demo after installation you need to run;

```
streamlit hello
```
